XP line
small size, great power

XP47 Thermal chamber
The main feature of the XP47 is the color display screen (3.5") with 320x240 dots resolution with led backlighting. XP47 is made in DIN 96x96 format and the module dimensions are 96x96mm.

The user interface is easy and friendly. The easy touch screen system gives both the typical "easy to use" approach of a touch screen system and the strength and mechanical protection of a polycarbonate IP54 keyboard.

At every screen the function keys display a different graphic making the program very user friendly.

The user can select the display language: all the wording, acronyms and "help" texts for programming assistance will be displayed in the chosen language.

Each programming step has its own help screen so the program has a "built in" instruction manual.
XP47 realizes the temperature / humidity control of climatic cells (seasoning / thermal chambers, etc.).

The daily archive records the following parameters:
- Minimum-medium-maximum temperature
- % Minimum-average-maximum humidity

In addition, the total cycle operating times are memorized (heating, cooling, humidification, dehumidification, air changes).
Inputs and outputs

Inputs:
- Temperature probe
- Humidity probe
- Max heat probe

Outputs:
- Heating
- Cooling
- Humidification
- Dehumidification
- Ventilator / Air exchange (cycle)
- HDY6 outputs (optional slot)
- Light
- Timer
- Aux.1
- Aux.2
- Alarm

Other available connections:
- USB plug
  XP47 has a USB plug on the back. When selecting the USBP option you can get a USB plug with a (IP65) protection cap externally mounted so you can access the USB without having to go to the back of the unit.
- XNET
  Network connection card (optional) for XP47 processor (see remote supervision).
The communication with the outside world is performed by USB key.

- **Export archives**
  XP47 save in the USB memory a file containing all the day by day recorded data of the cycle. Connecting the USB key to a PC and by using the **XP47 Dialogue** software you can browse the recorded data in grid or graph formats.

- **Importing / saving the setting**
  You can save a file with all back-up infos on a USB file. Saved settings can be uploaded on **XP66** anytime by a user friendly procedure.
Remote supervision of XP47 processors grants the full management of system by PC.

The XP47 Net Pro supervision software enables the full remote control of network connected processors. ULAN peripheral is connected to PC through a USB connection. XP47 – ULAN connection is done by a simple 3 wires cable. In all cases where ULAN cannot be cabled to XP46 we can supply TR04 radio-modems with a reach of 400 mt.

Components for creating a supervision system:

- **ULAN**: Network server Pc (with USB connection)
- **XNET**: Network adapter card (one for each XP47)
- **TR04**: Radio-modem 485 (optional, to be used only when it is not possible to use the cable)
